

Rasi Application

Product Documentation – Version 0.1

Purpose: Centralize customer accounts, daily collections, lines, sectors, team assignments, investment, profit and notifications in one application.

Document Scope

This document describes the initial product requirements based on the current manual Google Sheet process. It focuses on business flow, user roles, core features, calculations, dashboards and notifications.

1. Product Overview

Rasi is a collection and account management application designed to replace the current manual Google Sheet process.

Rasi will manage customers, accounts, sectors, collection lines, seniors, juniors, daily collections, investment, profit, account completion, notifications and reports.

2. Current Business Process

A customer requests an account amount. For example, Guru requests ■10,000. Customer contact details and reference person details are collected.

The business provides an amount such as ■8,500 or ■8,800. From the next day, a daily collection is made, for example ■100 per day.

The Junior visits the customer, collects the amount, gives or updates the collection note, and records the collection in the application. The process continues until the account is completed.

3. Business Scale

The current operation has more than 1,000 customers, more than 10 collection lines and multiple sectors. Each sector can contain multiple lines, and each line can have different customers and collection staff.

Managing this scale through Google Sheets creates difficulty in tracking assignments, daily collections, completion dates and overall performance.

4. Application Objectives

1. Manage all customers in one place.
2. Manage sectors and collection lines.
3. Assign seniors and juniors.
4. Track daily customer collections.
5. Identify low and extra collections automatically.
6. Notify seniors about important collection changes.
7. Track account completion.
8. Calculate the 100 collection days automatically.
9. Exclude Sundays from collection days.
10. Track investment and profit.
11. Provide line-wise and sector-wise reports.
12. Give the Super Admin a complete business overview.

5. User Roles

Super Admin: Owner and highest-level user with complete business visibility.

Admin: Manages day-to-day collection operations, customers, sectors, lines and team assignments.

Senior: Supervises an assigned collection line and monitors juniors and customer collections.

Junior: Mainly collects money from assigned customers and records the collection in Rasi.

6. Business Structure

Super Admin → Sector → Line → Senior → Junior → Customer

Each sector can have multiple lines. Each line can have a Senior, multiple Juniors and multiple customers.

7. Customer Management

Each customer should have an individual profile containing customer name, mobile number, address, reference person, reference contact, sector, collection line, senior, junior, account amount, invested amount, profit, daily collection amount, start date, collection progress, completion date and account status.

8. Account Creation

Example: Account Amount ■10,000; Invested Amount ■8,500; Profit ■1,500; Daily Collection ■100; Collection Period 100 collection days.

The system should automatically calculate related values wherever possible.

9. Investment and Profit

Account Amount: Customer account value.

Invested Amount: Actual amount given to the customer.

Profit: Difference between account amount and invested amount.

Example: ■10,000 account amount – ■8,500 invested amount = ■1,500 profit.

The same information should be available at customer, line, sector and overall business levels.

10. Daily Collection

After account creation, the customer receives a daily collection schedule. The Junior collects the expected amount and records the actual amount.

The system should show expected amount, collected amount, difference and collection status.

11. Collection Calculation

Correct: Expected ■100, Collected ■100 → Correct.

Low: Expected ■100, Collected ■80 → ■20 Low. Senior receives a notification.

Extra: Expected ■100, Collected ■120 → ■20 Extra. Senior receives a notification.

12. Collection Notifications

New Collection: Notify the relevant Senior when a new customer/collection is assigned to a Junior.

Low Collection: Notify the Senior when the actual collection is below the expected amount.

Extra Collection: Notify the Senior when the actual collection is above the expected amount.

Account Completion: Notify the Senior when the customer completes the required collection days.

13. 100 Collection Days

The application should automatically calculate the customer's collection period. Sundays should not be counted as collection days.

When the customer reaches the 100th valid collection day, the account status should automatically change to **Completed** and the relevant Senior should receive a notification.

14. Line Management

Each line should show its sector, Senior, Juniors, customers, account count, account value, invested amount, profit, expected daily collection, actual daily collection, pending collection, extra collection and completed accounts.

15. Senior Assignment

Each line should have an assigned Senior. Senior line changes are expected to be rare. Senior assignment should be controlled by the Super Admin or Admin.

16. Junior Assignment

Juniors may move between lines more frequently. Admin should be able to assign a Junior to a line, move the Junior to another line, and view the Junior's current line and customers.

Relevant notifications should be generated when an assignment changes.

17. Super Admin Dashboard

The Super Admin dashboard should provide a complete overview of the business.

Key information: Total Sectors, Total Lines, Total Customers, Active Accounts, Completed Accounts, Total Account Amount, Total Invested Amount, Total Profit, Today's Expected Collection, Today's Actual Collection, Pending Collection, Extra Collection and Low Collection.

18. Sector Overview

The Super Admin should be able to compare sectors using line count, customer count, account amount, investment, profit and collection status.

19. Sector Collection Status

The dashboard should show how many sectors have completed their daily tally, how many have extra collection and how many have low collection.

Example: Tally Completed 8; Extra Collection 2; Low Collection 2.

20. Line-wise Overview

The Super Admin and Admin should be able to see who is handling each line, including the Senior, number of Juniors and number of customers.

21. Admin Dashboard

The Admin dashboard should focus on daily operations: new customers, active customers, completed accounts, total accounts, sector-wise accounts, line-wise accounts, expected collection, actual collection, pending collection, low collection, extra collection, senior assignments, junior assignments, total investment and total profit.

22. Investment Overview

Investment information should be available for each line and as an overall total.

Example: Line 01 — Account Amount ■50,000, Invested Amount ■42,500, Profit ■7,500. Line 02 — Account Amount ■40,000, Invested Amount ■34,000, Profit ■6,000. Overall — Account Amount ■90,000, Investment ■76,500, Profit ■13,500.

23. Dashboard Calculation Levels

Customer → Line → Sector → Overall Business

Customer-level values should roll up into the line, sector and overall dashboards automatically.

24. Notifications Center

Notification types can include Information (new customer, new assignment), Success (daily tally, account completed), Warning (extra or pending collection) and Alert (low collection, mismatch or missed collection).

Notifications should be shown according to the user's role and responsibility.

25. Initial Application Navigation

Dashboard
Customers
Sectors
Lines
Collections
Team
Notifications
Reports
Settings

Navigation and available features should change based on the user's role.

26. Role-Based Access

Super Admin: Full access.

Admin: Operational management and reporting.

Senior: Assigned-line monitoring and verification.

Junior: Assigned customer collection and collection entry only.

27. Main Business Flow

New Customer → Customer Details → Reference Details → Create Account → Calculate Investment & Profit → Select Sector → Assign Line → Assign Senior → Assign Junior → Daily Collection → Collection Entry → Compare Expected vs Actual → Notification if Required → Daily Tally → Complete Collection Period → Account Completed

28. Problems Solved by Rasi

Rasi will reduce dependency on Google Sheets, centralize customer information, simplify management of 1,000+ customers, manage multiple sectors and lines, clearly show staff assignments, track daily collections, identify low/extra collections, send automatic notifications, calculate collection days, exclude Sundays, track completed accounts, track investment and profit, and provide complete business visibility.

29. Key Product Principle

The Junior collects.

The Senior monitors.

The Admin manages.

The Super Admin controls the complete business.

The application should keep each role simple and show only the information required for that role.

30. Version 0.1 Scope

Initial scope: User roles, customer management, account creation, sector management, line management, Senior assignment, Junior assignment, daily collection, collection calculation, low/extra collection alerts, 100-day collection tracking, account completion, investment tracking, profit tracking, dashboards, Senior monitoring, basic reports and

notifications.

31. Next Documentation Level

After the business requirements are approved, each screen should be documented using: **Page → Purpose → Data → Fields → Actions → Permissions → Status → Calculations → Notifications → Empty State → Error State.**

This will become the detailed Rasi Functional and UI/UX Specification for design and development.

Appendix A – Role Access Summary

Feature	Super Admin	Admin	Senior	Junior
Overall Dashboard	Yes	Yes	No	No
Sector Management	Yes	Yes	View	No
Line Management	Yes	Yes	View	No
Customer Management	Yes	Yes	View	Assigned
Collection Entry	View	View	Verify	Yes
Senior Assignment	Yes	Yes	No	No
Junior Assignment	Yes	Yes	View	No
Investment Overview	Yes	Yes	Limited	No
Profit Overview	Yes	Yes	Limited	No
Notifications	All	Operational	Assigned	Own
Reports	Yes	Yes	Limited	No
